Branch Meeting

Wednesday 13th March 2002 at 6.30pm

Extreme Programming

Brian Shearing

Extreme Programming, XP (no relation to Microsoft), is a way of building software, which turns out to be well-suited to the demands of modern business for fast delivery, ever-changing requirements, and no sacrifice of quality. It affects planning, customer relations, design, coding and testing.

In contrast to the rather dour content of most methods of software development, XP has aspects that are rather fun. This talk explains what XP is, where it came from, why it emerged, and when it works best.

The speaker will present his own experience in applying XP to two substantial developments over three years.

Venue:

**The Royal Pharmaceutical Society
36 York Place, Edinburgh EH1 3HU**

ADMISSION FREE, NON-MEMBERS WELCOME
